

Thariq Hamad

Senior Product Manager | Head of Product

Riyadh, Saudi Arabia | thariqhamad6@gmail.com | +966565329004 | [Thariqhamad](#)

SUMMARY

Product Manager with close to a decade of experience scaling first-of-its-kind digital products from zero across enterprise SaaS, AI, mobility, and sports analytics, spanning both startup and enterprise environments. Repeatedly functioning at Head of Product scope across three organizations, Fortude, Sling Mobility, and FieldR, owning multi-product roadmaps, leading teams of up to 34, and reporting directly to CEOs, boards, and C-suite stakeholders, formally recognized as Head of Product at FieldR. Delivered product-led GTM campaigns generating a 7M+ SAR revenue pipeline and 700K SAR in immediate closed revenue from just 3.75K SAR in spend, achieving up to 1,800% ROAS across Europe, the USA, and Sri Lanka. Managed enterprise SaaS products and multiple client-specific variants for Infor M3 ERP customers across Food & Beverage, Apparel, and LNG verticals, owning roadmap execution end-to-end and presenting growth strategy at CSO-level and board-level. Built and shipped hardware-integrated IoT products from first principles, including Sri Lanka's first battery-swapping ecosystem, translating user research, operational data, and deal-cycle feedback into prioritized roadmap decisions. Secured high-value commercial partnerships with globally recognized enterprise brands through AI-driven product innovation, delivering up to 45% revenue growth and up to 75% reductions in operational disruptions across product lines. Transferable Iqama - **Immediately available for both FTE & FTC engagements, flexible with relocation across the greater GCC, call me to discuss product direction, objectives, and challenges.**

EXPERIENCE

Product Manager (Head of Product Scope)

Fortude

October 2024 - Present, Colombo, Sri Lanka

- Owned multi-product roadmap and go-to-market strategy across the full Fortude AI SaaS portfolio, functioning at Head of Product scope by setting product direction independently and managing a 30-person cross-functional team including the head of marketing.
- Led 2 enterprise SaaS products (Fortest and Charlie) and client-customized product variants, overseeing a team of 30 professionals including the head of marketing, and aligning features to industry trends via agile practices.
- Positioned Fortest as the most affordable automated regression testing tool for Infor M3 ERP systems across Food & Beverage, Apparel, and LNG verticals, with a roadmap to expand into further verticals.
- Built a 7M+ SAR annual revenue pipeline across 2 products and presented roadmap progress and growth strategy in CSO-level and quarterly board reviews.
- Implemented 2 LinkedIn webinar campaigns targeting decision-makers in specific regions and company types, delivering 700K SAR in immediate sign-ups on a 3.75K SAR budget (1,800% ROAS), the highest-performing campaign of its kind at the company to date.
- Created a GTM blueprint to replicate webinar-driven pipeline generation for future products, including a framework to identify the optimal GTM strategy by product type.
- Reframed Fortest's value proposition around outcomes rather than technical features, based on win/loss and competitor analysis plus buyer research, to accelerate B2B adoption.
- Managed the Charlie AI Answer Assistant and shifted product strategy from an accuracy focus to response clarity; improving the end-user experience; implemented a data-credibility validation agent that drove a 75% increase in usage among early adopters.
- Ideated and owned the roadmap for a standalone AI Insight Agent built on the Charlie architecture, enabling advanced analytics and workflow automation, and directly securing a strategic partnership with Toyota Sri Lanka to evaluate automating their manual service-job processes.
- Translated user discovery sessions and deal-cycle feedback into prioritized roadmap decisions, improving product-sales cohesion and reducing time-to-decision.
- Created a marketing data room for regional teams to access sales collateral, increasing follow-up rates and improving team communication.

Head of Product

FieldR

October 2023 - October 2024, Colombo, Sri Lanka

- Scaled Sri Lanka's first cricket data analytics SaaS platform, owning product vision, roadmap, monetization strategy, pricing, and GTM execution end-to-end while managing a team of 12 across development, marketing, and operations.
- Achieved a 75% conversion rate from free to paid users and secured 20K SAR in seed funding from a state entity by demonstrating product-market fit.
- Designed and shipped a peer-to-peer split-payment feature allowing team captains to collect event fees from players in-app, with funds escrowed at the captain's wallet level and disbursed automatically; owned the end-to-end payment gateway integration, including transaction handling, failure recovery flows, and reconciliation logic, supporting a dual revenue model of SaaS subscriptions plus a take-rate on payment transactions.
- Achieved early product success by executing a GTM strategy focused on schools and grassroots-level clubs.
- Expanded the user base from Sri Lanka to Australia, signing 2 clubs to use the fielding performance analysis component.
- Identified 30+ performance data points by directly addressing the pain points of coaches and analysts in club-level cricket, enabling role-based analytics.

Product Manager (Head of Product Scope)

Sling Mobility

June 2021 - October 2023, Colombo, Sri Lanka

- Joined as the first employee and functioned as the Head of Product, wearing multiple hats across technology and operations, scaling the organization to a 34-member team; and overseeing a global product development team of 12; reported directly to the CEO and board, and managed all client, vendor, and partner communication.
- Conducted research into electricity usage, fuel consumption, vehicle wear and tear, elevation challenges, and electronic parts management to validate a viable EV business case in Sri Lanka amid rising fuel prices.
- Led end-to-end product strategy and business operations for a B2B2C last-mile delivery model and an electric bike sales vertical.
- Designed user-centric mobile app and web application UIs, initiated development, and structured a roadmap using agile practices.

- Designed Sri Lanka's first battery-swapping cabinet in partnership with one of the country's largest electrical product manufacturers, and built a lock/unlock system that automatically identifies rider, discharged battery, and charged battery, reducing swap time from 90 to 20 seconds across three iterations of process and IoT innovation, including an in-cabinet tablet application and direct charger-to-database communication via custom IoT connectors.
- Built a command centre consolidating company-wide data and insights, from employee engagement to last-mile delivery routes, using the data to identify new swap-station locations and extend ride range from 60KM to 100KM and battery lifetime from 2 to 4 years on the same hardware.
- Built a real-time feature tracking travel distance, battery voltage, and nearest swap station to prevent battery-caused motor shutdowns mid-ride, cutting roadside assistance requests by 75% and increasing active rides from 25 to 62 per day per rider.
- Designed an anti-theft, remotely deactivatable battery system enabling an energy-as-a-service model where battery access could be tied to a rider's subscription payment status.
- Launched Sri Lanka's first battery token program, funding 100 new-generation batteries and enabling token holders to earn ongoing revenue shares.
- Deployed revenue-share-based battery-swapping cabinets across 10 roadside garages, validated with low-income households, increasing brand credibility and revenue by 30%; implemented a rider incentive scheme that increased monthly revenue by 45%, and a roll-forward plus peer-to-peer kilometre-sharing feature on subscription plans that increased rider subscription conversion by 17%.
- Negotiated a commercial and technical integration with Uber Sri Lanka, broadening the platform's operational reach and distribution, and structured a smart EV mobility roadmap presented to a local university and the Maldivian government.

Project Manager (FTC)

Motion Miracles

December 2020 - June 2021, Colombo, Sri Lanka

- Functioned as business operations lead and project manager before taking on the operations manager role to oversee the entire organization's operations, owning resource planning, financial analysis, and cost analysis.
- Launched 23 hyper-casual games across multiple publishers, generating 200K SAR in new revenue, while implementing and tracking KPIs for creative teams across animation, game development, and services departments.
- Consulted on the launch of a FinTech BNPL product: created the project plan, tracked activities, ensured user research informed feature-level decisions, and worked on the application's KYC process design.

Program Associate (FTC)

GOOD LIFE X

August 2020 - December 2020, Colombo, Sri Lanka

- Managed a 4-month accelerator program for 10 startups and founders building eco-friendly products across Sri Lanka, implementing an OKR framework to track progress against program objectives.
- Reviewed pitch decks and advised founders on standardizing presentations ahead of investor engagement and demo day.

Project Manager

Win Authority Innovative

July 2018 - August 2020, Wyoming, United States

- Joined as a freelance contributor and converted to a permanent remote role; functioned as both business analyst and project manager, focused exclusively on web application project delivery in a startup environment.
- Drove the delivery of 8 SaaS and web application projects, managing a team of 4 developers within defined timelines, budgets, and scope, covering requirements, sprint planning, vendor coordination, release management, and UAT.
- Supported business development by pitching to potential clients and contributing to pricing and resource planning decisions.

Project Manager (Intern)

MillenniumIT ESP

July 2017 - July 2018, Colombo, Sri Lanka

- Managed a 1.5M SAR core banking sector project, the highest-budgeted project led by an intern in the organization's history at the time, overseeing a team of 4 developers across Sri Lanka and India, and identifying and resolving project discrepancies through targeted strategies.
- Presented project strategies, timelines, issues, and risks weekly to client-side stakeholders and the banking sector VP, while tracking issues and testing solutions in the UAT environment to accelerate the testing phase.
